BENDING SPOONS S.P.A.

## Job Application for Backend Engineer

### About Me

---

I'm Luigi, a software engineer with 12 years of experience in many different areas of software. Most of my experience lies in full stack development with more focus on backend development. During my career, I have crafted C# Windows applications with some highly optimized code written directly in IL, web applications tailored to customer needs using technologies like Angular, TypeScript, SASS and many PHP backend frameworks and in the last 5/6, I focused mainly in functional programming using technologies such as Scala, Akka and Elixir.

I often start personal projects just for the fun of learning new skills. I have recently made a personal zsh framework (like oh-my-zsh but much more simple and lightweight), started studying Rust to make a PR on an open source project and started writing an SQLite clone in C just to learn better databases internals.

### Why Bending Spoons?

---

I'm impressed by the quality of your products and the number of people it reaches. I like the idea to build something that can have an impact on people's day-by-day life. I'm also very curious about the technologies you have developed! I did some experiments in video editing in the past (very amatorial), I have always been fascinated by these pieces of technologies and I'm thrilled to know how Fellini works. Furthermore, when I was in Milan, I participated in some of your meetups and the environment you have built seemed compelling and challenging, full of skilled and passionate people. An environment in which I feel I can contribute and grow.

Sincerely,

**Luigi Clemente**
